

Damián Ladiani

Laravel developer

(+54) 15 58140669 · damianladiani@gmail.com · Vicente López, Argentina

About me

PHP/Laravel developer with 10+ years of experience building production systems, from government platforms to fintech integrations. These days I pair deep backend expertise with AI-directed development — using tools like Claude Code to plan, implement and review code faster, while staying accountable for architecture and quality. Comfortable across the stack when needed. Looking for remote opportunities to bring that combination to a global team.

Skills

Laravel	90%	PHP	90%
AI-Assisted Development	90%	Javascript	80%
HTML/CSS3	80%	MySql	80%
Git	80%	English Level	80%
Web Services API	70%	TDD	70%
Bootstrap	60%	Linux	50%
Vue.js	50%	Docker	40%
Redis	40%	Livewire	30%
Pest	30%	Filament	30%
Tailwind	30%	Inertia.js	30%

Other Knowledge

JQuery · Responsive Design · SOLID · Eloquent · Queues · Blade · Cron

Experience

2009 – Now

Freelance Developer

Independent PHP/Laravel developer since 2009, building systems, sites and APIs on my own and with friends. Past projects include a car insurance system and an ice cream shop's management system. More recently, I built a Laravel + Vue integration that connects to a client's MercadoPago account and automatically syncs incoming and outgoing transfers, replacing a manual process where the business owner had to check by hand whether each transfer had gone through. I'm currently building edutimetable, a scheduling platform for educational institutions with a standout feature: before confirming a course's schedule change, it previews which students and teachers would end up with conflicts.

2019 – Now

Senior Web Developer · Metrotel

As a Programmer Analyst on the Dispo platform, I oversee core modules for sales-opportunity tracking, product catalog management and company record keeping, ensuring data integrity and smooth operations. I also lead Laravel code reviews—championing PSR standards, design patterns and clean architecture—to support our ongoing migration, boost maintainability and slash post-deployment issues. I've also brought AI-directed development into the team's workflow, using Claude Code to move faster on features and refactors while keeping the same quality bar.

2013 – 2019

Semi Senior Web Developer · Ministry of Security

Programmer analyst developing some projects, principally in laravel. Developer frontend with CSS3 and HTML5, applying libraries like JQuery, Vue.js or bootstrap.

2011 – 2013

Semi Senior Web Developer · Ministry of Defense

Programmer of web systems with backend in PHP and databases with mysql.

2006 – 2011

Junior Web Developer · Argentinian Army

Programmer of a logistic system of Argentinian Army. During the last months, chief of the developer team.

Education
